The vapor pressure of beryllium fluoride was deter-
 mined over the range 762 to 1103°C. The vapor pres-
 sure of liquid sodium fluoride was determined over the
 range 1073 to 1193°. The dissociation pressure of the
 sodium fluoberyllate Na_2BeF_4 was determined over the
 range 1009 to 1197°. The apparent partial pressure of
 sodium fluoride over the sodium fluoberyllate is mark-
 edly greater than the vapor pressure over pure sodium
 fluoride, because of the existence of complex mole-
 cules in the vapor phase. (Author)
